

► **VAPOR DISTRIBUTION LINE**

Hinsilblon's **Vapor Diffusion Manifold** is utilized to treat fugitive nuisance odors as they are emitted from covered holding and process tanks.

Vapor Diffusion Manifolds are constructed from polypropylene pipe and mounted on the inlet side of the exhaust fans and vents.

► **HOW THE SYSTEM WORKS**

Hinsilblon's Patented Waterless Vapor Odor Control Unit will convert a pure and natural blend of essential plant oils from a liquid to an Odor Neutralizing Waterless Vapor.

This odor neutralizing vapor will be delivered into the malodorous air as it passes through the exhaust fan or vent.

As the Odor Neutralizing Waterless Vapor and the fugitive Odors contact one another, the odor is neutralized.
