

Hinsilblon's Vapor Distribution Line is designed to be utilized in conjunction with Hinsilblon's Patented Waterless Vapor Odor Control Unit to treat the fugitive nuisance odor emissions from lagoons.

The **Vapor Distribution Line** is constructed from durable, corrosion resistant flexible hose, polypropylene pipe, and/or polyethylene pipe and fittings for consistent, reliable operation.

Vapor Distribution Line installed around Lagoon

► **VAPOR DISTRIBUTION LINE**

The Odor Control Unit should be placed in a location convenient for electrical power and periodic access. The Vapor Distribution Line is positioned around the perimeter of the lagoon.

An odor neutralizing blend of natural, biodegradable essential plant oils is converted from a liquid to an Odor Neutralizing Waterless Vapor within the Odor Control Unit.

This Odor Neutralizing Vapor will flow from the Odor Control Unit to the Vapor Distribution Line, where it will be delivered into the fugitive odors as they cross the perimeter of the lagoon.

The Odor Neutralizing Waterless Vapor will treat fugitive nuisance odors on contact.
